If all government agencies
and departments of state, including
the central bank, agreed to
fund a central bank, elimination
of all currency by private individuals
would be a reality.

If all banks were funded
by the central bank, the only
other entities allowed to conduct currency
would be the central bank.

If you wanted to notably
lower interest rates according to monetary
theory, this would accomplish it.

If all bank deposits were centrally
monitored, it would be possible
to determine the currency
of origin of any transaction.

By law, each bank is naturally
subject to examination, including
the central bank, which is responsible
for the currency.

If all bank accounts were centrally
monitored, it would be possible
to determine the currency
of origin of any transaction.
